## Part I: Emergency Plans for Mobile Home Parks

### Introduction

The following information is provided as a general guide for the community of Aberdeen California. It contains guidelines and specific information that may be useful in the event of a natural disaster or man-made emergency. Not all aspects of this document are perfect.

The goal of the emergency plan is to reduce the risk to life, health, and safety of community residents and emergency services personnel. To ensure that all park residents can be evacuated in a safe and timely manner in an emergency, assistance shall be provided to residents with disabilities and health issues that may need assistance during an evacuation. The plan identifies essential evacuation routes that will be used in an emergency situation. Residents have access to the plan and information via Aberdeen's website, posted in the mail area, as well as request hard copies. This plan will have information to make personal emergency plans in order to enable residence to take personal responsibility for themselves during an emergency. An important consideration in any emergency is the ability to coordinate with local responding agencies and personnel. It is imperative that residents work in conjunction with and assist emergency response personnel as directed or instructed.

### Questions and Answers:

items of interest:

- How many entrances and exits are there in the park?
  - 7 to the East and 2 to the West
- Is two way traffic accessible throughout the park?
  - YES
- Are there concentrations of households who need special assistance to evacuate congregated in certain sections of the park?
  - No
- Would any section of the park be easier and quicker to evacuate first?
  - No
- Are there any fixed obstacles in the park that would hinder a sections Evacuation route?
  - No

- If an entrance or exit is blocked, do you have an alternate evacuation route planned?

All streets have connections to other streets. Also exit to the North, or South on Tinemaha Road is available, or to the East on Goodale Road, then either North or South on US 395
- In the event that all evacuation routes are disabled, is there a backup plan for evacuation such as a site for air lifting residents from the park?

This would be highly unlikely, as there are numerous ways to exit Aberdeen. However in the event of air evacuation landing in the surrounding fields of sage brush is available.
- Identification of the major safe sites in your community that emergency agencies use for evacuation.
  - 1) Meet in parking area immediately in front of store area.
  - 2) In the event of an earthquake meet at the West end of Aberdeen between Bourbon Street and Mt View lane, as there are no overhead power lines or propane tanks in this location.
- Supplying park residents with maps of the major routes out of the area.
  - There is evacuation maps included in this plan. These maps are located on pages 7 & 8.
- Safety issues that park residents can address before a disaster to make their homes safer (example: tie downs for LPG tanks; installation of smoke detectors, securing hot water heaters).
  - 1) LPG tanks are located in three areas around Aberdeen. These tanks are the property of Amerigas Company and are not the responsibility of Aberdeen or its residents. However these tanks are located in three areas around Aberdeen, are on concrete slabs, and have steel posts protecting them from vehicle traffic.
  - 2) The knowledge of how to turn off ones gas main at the meter is the responsibility of each resident to learn. Any questions on how to do this may be directed to management of Aberdeen, or to Amerigas.
  - 3) It is the responsibility of each resident of Aberdeen to ensure their home is safe and up to code. A copy of Title 25 Manufactured home building code is available for viewing at the managements home office. In accordance with State building codes all water heaters are to be secured to the wall with in the heater cabinet, using non-combustible means.
  - 4) It is recommended to have smoke alarms throughout the manufactured homes interior rooms. Information of proper placement of these can be found by contacting manufacturer of home, or by contacting the local fire department or CalFire.

- At a minimum, the park plan should include the following information: elevation of the park property, type of disasters common to your area; public warning signals used in the community; local emergency broadcast station frequency location; phone numbers to the local Red Cross chapter or other emergency agencies' phone numbers.
  - 1) The elevation of Aberdeen is 3970 feet above sea level.
  - 2) Types of disasters that would most likely effect Aberdeen are as follows
    - a. Earthquakes
    - b. Wildland fires
    - c. High wind events (winds are not uncommon to measure in upward of 70mph range)
    - d. Possibility of vehicle accident with Hazardous emissions escaping into wind currents causing the need for evacuation
  - 3) Radio station Frequencies that could provide emergency information are as follows:
    - a. KIBS 97.7 or 107.1
    - b. KSRW 92.5
  - 4) In case of emergency call 911. In the event of evacuation necessary for Aberdeen or warnings of impending evacuation a "Reverse 911" system is in place to contact all residents.
  - 5) Public warning system at Aberdeen is by people going door to door and knocking. There is also a "Reverse 911" system in place through the Sheriff's department.

The above list of questions and statements and answers are only a sampling of items that are identified and described in the park's evacuation plan.

## **Evacuation List of Residents by Section**

In the event that any individual feels they would need assistance in evacuation should register with Aberdeen Management to identify any and all assistance that will be necessary. These individuals will be provided with assistance in the event of an emergency evacuation. A list of these individuals will be kept with management staff, as well as a list will be provided to individuals interested in assisting others.

**Any individuals willing to assist others in the event of an evacuation will please identify themselves to Aberdeen Management. These individuals will be made known to others who will need assistance.**

## **Evacuation Sites**

In the event of an emergency or disaster requiring the inevitable need to evacuate Aberdeen to another Community, (Big Pine or Independence) it would be determined by the County of Inyo Emergency Disaster authority as to the location of these sites.

The Inyo County Sheriff's department and the department of Health and Human Services are charged with setting up emergency shelters for evacuation. During the emergency these shelters will be established in safe locations and direction will be provided to evacuees as early as possible. Many times these shelters will be established in community gymnasiums or town halls.

Closer evacuation sites could be established at Taboose Campground to the north, or possibly at another site to the south.

Provided that a local emergency exists and evacuation to other communities is not required the café could be used for a site to congregate at. It is advisable to residence to move away from the immediate area of emergency and provide access by emergency personnel. Any vehicles and pets should be moved out of the area and out of roadways. While many will try and remain in the immediate vicinity of an emergency for taking of photos, videos or plain curiosity the cooperation of each resident is needed to provide access as well as the safety of emergency personnel.

## Evacuation Map

This map has an over view of roads around the community of Aberdeen. There are several routes which provide ingress and egress for Emergency service personnel, as well as for evacuation of residence.

### Close in aerial map of Aberdeen

This map has all exits available for the community of Aberdeen. Make note that both exits to the west (top of map) are exiting to dirt roads. These two exits are through 12' gates which are normally closed, however never locked. Ingress and egress through these two gates are permitted by anyone at anytime.

In the event of an emergency and evacuation becomes necessary the direction of egress would depend on location and cause of emergency. Evacuation to other communities would be determined by the Inyo County Emergency Management, or primarily the Sheriff's department.

## **Authorities/Regulations**

### **Authority**

California State Law governing mobile home parks is entitled the "Mobile Home Parks Act" and may be found in Division 13, Part 2.1 of the California Health and Safety Code, commencing with Section 18200. The California Law governing Special Occupancy parks is entitled the "Special Occupancy Parks Act" and may be found in Division 13, Part 2.3 of the California Health and Safety Code, commencing with Section 18860. These Acts establish many requirements for the permits, fees, responsibilities of park owner or operators, and enforcement agencies, including the Department of Housing and Community Development (DHCD). These Acts also require DHCD to promulgate regulations and to enforce both the laws contained in these Acts and their regulations.

**Mobile Home Parks Act - Health and Safety Code 18200 - 18700**

**Special Occupancy Parks Act – Health and Safety Code 18860 - 18874**

### **Regulations**

Mobile Home Park Regulations

Special Occupancy (RV) Park Regulations

These regulations are updated regularly and are contained in the California Code of Regulations, Title 25, Division I, Chapter 2 commencing with section 1000. The regulations include specific requirements for park construction, maintenance, use, occupancy, and design and include requirements for items such as lot identification, lighting and roadway width, plan and permit requirements, specific requirements for the installation of mobile homes, accessory structures and buildings, earthquake resistant bracing systems, application procedures, fees, enforcement and appeal procedures.

## Part II: A Disaster Preparedness Planning Guide for Residents Aberdeen

### Introduction

The most important feature of any home is something you probably do not see when you walk through the door. But it could save your life. It is **safety**. Safety comes in all shapes and sizes: smoke detectors; fire extinguishers; escape routes; carefully maintained heating and electrical systems; and knowing what to do and where to go in case of fire, flood, tornado, or other disasters. The key to being prepared in the event of a disaster or sudden emergency is preplanning and practice drills.

### Disaster Preparedness Emergency Plan

The next time disaster strikes, you may not have much time to act. Prepare now for a sudden emergency. Knowing what to do in an emergency is your best protection and your responsibility. Learn how to protect yourself and your family by planning ahead. To obtain more information, you may want to contact your local emergency management agency or civil defense office and the local American Red Cross chapter - be prepared to take notes.

You will need to gather the following information:

- Find out which disasters are most likely to occur in your area. See pages 4 and 5 above.
- Ask how to prepare for each disaster.
- Learn about your community's warning signals: what they sound like and what you should do when you hear them. Aberdeen currently does not have an audible warning signal. There are currently two methods used to notify residents of pending emergencies, these are as follows:
  - Personal notification by knocking on doors, or using phones.
  - Inyo County Sheriffs use of Reverse 911 (which uses phone system)
- Learn your community's main evacuation routes. See maps pages 7 & 8.
- If needed, ask about special assistance for the elderly or disabled persons. Check with Aberdeen management for needs.

- Ask about animal care during and after an emergency. Animals may not be allowed inside emergency shelters due to health regulations.
  - Inyo County does identify shelter facilities for pets during emergencies. Usually provided at the two Veterinary hospitals in Bishop.

## **Checklist of Emergency Procedures**

Meet with your family and discuss why you need to prepare for disasters. Explain the dangers of fire, severe weather and earthquakes to children, the elderly, and individuals that may need special assistance. Plan to share responsibilities and work together as a team. The following may be used in creating your own Emergency Response Plan:

- Draw a floor plan of your residence and mark two escape routes from each room.
- Install safety features in your home, such as smoke detectors and fire extinguishers.
- Discuss what to do in an evacuation.
- Find the safe spots in your home for each type of disaster.
- Post emergency telephone numbers near the telephone.
- Instruct household members to turn on a battery powered radio for emergency information.
  - KIBS 97.7 or 107.1
  - KSRW 92.5
- Pick one out-of-state and one local friend or relative for family members to call if separated by disaster (it is often easier to call out-of-state than within the affected area).
- Teach children how and when to call 9-1-1 and a long distance contact person.
- Pick two meeting places: 1) a place near your home in case of fire; 2) a place outside your neighborhood in case you cannot return home after a disaster.
- Keep family records in a water and fire-proof container.

- Locate the main electric fuse box, and power pedestal, water service main, and propane gas main shut off valve to your mobile home. Learn how and when to turn these utilities off. Teach all responsible family members, and guests. Keep necessary tools near gas and water shut-off valves. Turn off the utilities only if you suspect the lines are damaged or if you are instructed to do so. **If you turn the gas off, you will need a professional from Amerigas to turn it back on.**
- Take a basic first aid and CPR class.
- Prepare a disaster supply kit.

### **If Disaster Strikes**

- Remain calm and patient. Put your plan into action.
- Check for injuries; give first aid and get help for seriously injured.
- Listen to your battery powered radio for news and instructions.
- Evacuate if advised to do so. Wear appropriate clothing and sturdy shoes.
- Check for damage to your home - use a flashlight only. **Do not light matches or turn on electrical switches**, if you suspect damage.
- Check for fires, fire hazards and other household hazards.
- If you are remaining in your home, sniff for gas leaks, starting at the hot water heater. If you smell gas or suspect a leak, turn off the main gas valve, open windows, and get everyone outside quickly.
- Shut off any other damaged utilities.
- Clean up spilled medicines, bleaches, gasoline and any other flammable liquid immediately.

#### **Remember to:**

- Remember to confine or secure your pets.

- Call your family contact - **do not use the telephone again unless it is a life threatening emergency.**
- Check on your neighbors, especially elderly or disabled persons.
- Make sure you have an adequate water supply in case service is shut off.
  - In case of extended power outage water from Goodale creek may be used for flushing toilets. Drinking this water is not advised, however if necessary you may boil the water for at least 10 minutes and cool. This is not a guaranteed method of killing the giardia parasite which is located in the Sierra Nevada region. It is advisable to keep potable drinking water bottled with your emergency kit.
- Stay away from downed power lines.

## **Earthquake**

Prior to any earthquake, each resident should preplan and practice steps they will take in the event of an earthquake. Manufactured home owners/residents need to know the physical location of piers/supports under their homes. During a severe earthquake, manufactured homes have been known to drop off their supports and these supports may come through the floor causing physical damage above. In order to avoid injury, residents must know the location of the supports and where safe areas are located within their manufactured homes.

Be sure your manufactured home is installed in accordance with the manufacturer's instructions and all applicable state regulations and requirements.

- Indoors: take cover under any sturdy piece of furniture or doorway or get up on a bed or couch that is against a wall.
- Stay away from windows or ceiling objects such as lighting fixtures.
- **Do not light matches** or candles.
- **Do not turn on electrical** equipment of any kind.
- Use only **battery operated** flash lights and radios.

- Outdoors: find an open area and remain there until the earthquake stops.
- Stay away from power poles and electrical lines, tall buildings, bridges, brick or block walls, underpasses and trees.
- Listen to a self contained (battery operated) radio for emergency instructions.
- Confine and secure all pets so they will not hamper emergency service employees in the performance of their duties.
- After shocks may occur, so be prepared.

## **Fire Safety**

Fire spreads quickly and the entire structure may rapidly become engulfed in flames. There are steps you can take to minimize the dangers associated with fires and improve your families chances of survival should a fire erupt in your manufactured home.

- Be sure you have properly operating smoke detectors and fire extinguishers. If one or more of your smoke detectors are battery operated, replace the batteries annually or more often if necessary. An easy to remember schedule is to change your batteries to coincide with daylight savings time.
- Plan, with the whole family, at least two escape routes from your manufactured home.
- Practice fire drills regularly, using a smoke detector as a signal to start the drill. Follow your escape plan.
- Be sure your heating and electrical systems are properly maintained and in good working order. Change the heating filters as recommended by the heater manufacturer.
- Carefully follow the instructions on all appliances and heating units, taking special care not to overload your electrical system.
- Be especially careful when displaying your holiday decorations.

- Keep matches, lighters, and candles away from small children. Children tend to be curious about fire and tend to hide when frightened. Fire drills are most important for children between the ages of 2 and 12 years old.
- Insure your personal property. Shop around for a company that best meets your needs for renter's or home owner's insurance.
- Store important documents, such as birth certificates, marriage licenses, social security cards, and insurance papers, in a fire-proof box or in the refrigerator, or rent a safety deposit box at your local bank.
- Make an itemized list of your personal property, including furniture, clothing, appliances, and other valuables. If available, make a video tape of your home and your possessions. Keep the list and/or tape up-to-date and store them along with the other important documents.

## **In Case of Fire**

- Immediately assess the problem (where, extent involved, to assist you in exiting away from the fire source)
- Know how to use a fire extinguisher
- Get everyone out of the house **immediately**
- **Without risk to any person**, get pets out of the house
- Call 9-1-1 or the Fire Department then call the park office (from a neighbors phone) and:
  1. Give your name, telephone number you are calling from, park address, space number where the fire is, any helpful locational directions.
  2. Describe the type/nature of the fire (gas, wood, chemical, electrical).
  3. State that the fire is in a manufactured home and report any known injuries.
  4. Turn off the gas and electricity at the home(s) affected.
  5. Tell all residents near the fire source to stand ready with water hoses to wet down their homes or adjacent building(s) in case of traveling sparks.

6. Make sure all occupants have left the affected home and **immediately** let the fire department personnel know if any disabled person(s) or anyone not accounted for and may still be in the residence.
7. **Never go back into a burning home.**
8. If smoky conditions are present, remember that smoke rises and stay as close to the floor as possible. Before exiting through a door, feel the bottom of the door with the palm of your hand. If it is **hot**, find another way out. **Never open a door that is hot to the touch.**
9. Should your clothing catch fire: **first \*cover your face and mouth\*, drop...then roll. Never run.** If a rug or blanket is handy, roll yourself up in it until the fire is out.
10. If trapped on an upper floor, hang something out of a window to signal rescuers.

## **Floods**

Aberdeen is not prone to flooding, while Goodale creek does flow through Aberdeen. There are three diversions at higher elevation above Aberdeen that would allow high water to automatically be diverted. In the extreme rare instance that Aberdeen were to have high enough water to flood it then follow the information provided below:

Flood Watch means that there is the possibility of flooding.

Flood Warning means that flooding has begun or is imminent.

### **Before a flood:**

- Know the elevation of your property in relation to nearby streams, rivers, and lakes.
- Have several escape routes planned.
- The National Weather Service continuously broadcasts updated weather conditions, warnings and forecasts on National Oceanic Atmospheric Administration (NOAA) weather radios. A NOAA radio may be purchased at radio or electronic stores. Local broadcast stations transmit Emergency Alert System messages which may be heard on standard radios.

- When rising water threatens, move everything possible to higher ground.
- If flooding is imminent and time permits, turn off main electrical switch.
- Disconnect all electrical appliances. Cover outlets with tape.
- Prepare and maintain your Family Disaster Supplies Kit.
- Most standard residential insurance policies do not cover flood loss.
- In flood-prone areas, the National Flood Insurance Program makes flood insurance available for manufactured homes on foundations. See your insurance broker for details.
- Secure your Liquefied Petroleum Gas Containers. One option is to secure the tanks with stainless steel straps that connect to auger anchors in the ground.
- Strap and secure your hot water heater.

### **During a flood:**

- Take all flood warnings seriously. **Do not wait.** Get to higher ground **immediately** as flood waters often rise faster than expected.
- If time permits, take all important papers, photographs, medicines, and eye-glasses.
- If one escape route is not passable do not waste any time - try another route or back track to higher ground.
- Use travel routes specified by local officials. **Never** drive through flooded roadways. **Do not** bypass or go around barricades.
- Wear life preservers if possible. Wear appropriate clothing and **sturdy shoes.**
- Avoid any contact with flood water. Flood water may be contaminated and pose health problems. If cuts or wounds come in contact with flood waters, clean the wound as thoroughly as possible.
- Take your Family Disaster Supplies Kit with you.
- Lock your home before leaving.
- When you reach a safe place, call your pre-determined family contact person.

### **After a flood:**

- Return home **only** after authorities say the danger of more flooding is over.
- Do not drink tap water unless it is declared safe. Boil water if unsure.
- If fresh food has come in contact with flood waters, **throw it out**.
- Do not turn on main electrical switch. First have the electrical system checked by a professional.
- A flood can cause emotional and physical stress. You need to look after yourself and your family as you focus on cleanup and repair.
- Rest often and eat well. Keep a realistic and manageable schedule.
- Make a list and do jobs one at a time.
- Contact the American Red Cross and get a copy of the book *Repairing Your Flooded Home*. The book will tell you how to safely return to your home and begin the recovery process.

### **Tornado**

Although tornadoes are not a common occurrence in California, they have been reported. Here in the Owens Valley we have experienced “Dust Devils” which can swirl through an area picking up lawn furniture etc. In the event of these move indoors to avoid injury. These “Dust Devils” are not known to do any more damage other than to be a nuisance.

- Pay close attention to weather reports. Know the difference between a watch (when conditions are ripe for a severe weather event) and a warning (when a severe weather event is occurring or is imminent).
- Plan where to go during severe weather - for instance, the community club house, or a relative’s basement.
- When a tornado warning has been issued, **leave your manufactured home immediately**. Go to your pre-determined safe place or lie down in a low area with your hands covering the back of your head and neck.
- Be sure to keep a transistor radio - with working and extra batteries handy.

- Keep your Family Disaster Supplies Kit near an exit door.

## High Winds

- **It is not uncommon to have extreme high winds in and around Aberdeen. During the spring and fall we have experienced high winds in the 70 – 90 mph range. These winds have been known to blow sheds around as well as BBQ's lawn furniture, plywood, etc. These items can become airborne and be extremely dangerous. It is not advisable to try and stop these items once they become airborne, but to wait until they stop, then try and secure the item.**
- Pay close attention to local weather reports. When High winds are predicted for the local area it is advisable to ensure all lawn furniture, BBQ's, and other items are tied down or moved into secure areas. It is advisable to have any and all sheds tied down using augers in the ground with cables running over the shed and attaching to these augers.
- Plan ahead for these events. Know what could possible blow around, and take action to secure items , during the fall and winter it is advisable to keep these items secured, or put away, as sometimes these wind events come up during the night with no or limited notice.

## First Aid

- Information on first aid can be found in your local phone book or by contacting the American Red Cross.
- Utilize known persons who are medically trained (such as doctors, nurses, EMT's or people medically trained in CPR and first aid) to assist in administering first aid to those injured.
- If the injured individual(s) are in imminent danger they should carefully be moved to a safe location to administer first aid.
- In the case where injuries are severe and movement could cause further injuries, **do not move** the injured. Make the injured person(s) as comfortable as possible and wait for emergency personnel.
- Before emergencies, prepare a first aid kit. Have the kit in an easy to locate place. Make sure all family members know the location of the kit.

### **Sample First Aid Kit:**

- Sterile adhesive bandages in assorted sizes
- 2 and 4-inch sterile gauze pads (4-6 each)
- Hypoallergenic adhesive tape
- Triangle bandages (3)
- 2 and 3-inch sterile roller bandages (3 rolls each)
- Scissors
- Tweezers
- Needle
- Moistened towelettes
- Antiseptic
- Thermometer
- Tongue blades (2)
- Tube of petroleum jelly or other lubricant
- Assorted sizes of safety pins
- Cleansing agent/soap
- Latex gloves (2 pairs)
- Sunscreen
- Aspirin
- Syrup of Ipecac
- Activated charcoal (use only if advised by the Poison Control Center)

Government and Relief Agencies estimate that after a major disaster, it could take up to three days for relief workers to reach some areas. In such cases, a 72 hour disaster supply kit could mean the difference between life and death. In other emergencies, a 72 hour disaster supply kit means the difference between having a miserable experience or one that's like a pleasant family camp out. In the event of an evacuation, you will need to have items in an easy-to-carry container like a backpack or duffle bag.

## Family Disaster Supplies Kit

- 3-5 gallons of water (one gallon of water per person per day)
- Method of water purification
- Food: ready-to-eat canned meats, fruits, and vegetables; canned juices, milk, soup; high energy foods - peanut butter, jelly, crackers, granola bars, trail mix; specialty foods for infants, elderly persons or persons on special diets; comfort/stress foods -cookies, hard candy, sweetened cereals, lollipops, instant coffee, tea bags; vitamins
- Matches in a waterproof container
- Second method of starting a fire
- Tent/shelter
- Wool-blend blankets or sleeping bags (1 per person)
- Emergency reflective blanket
- Lightweight stove and fuel
- Hand and body warm packs
- Rain poncho
- Flashlights with extra batteries, light sticks, lantern with fuel and wicks
- Tools (pliers, hammer, screw drivers, bolt cutters, pocket/utility knife)
- Shovel and hatchet or axe
- Sewing kit
- 50-foot nylon rope
- First aid kit and supplies, including burn gel and dressings
- Bottle of potassium iodide tablets
- Radio, batteries, and extra batteries
- Whistle with neck cord
- Personal sanitation equipment
- Personal comfort kit (include soap, toothbrush, toothpaste, comb, tissue, razor, deodorant), and any other needed items
- Extra Clothing (include at least one complete change of clothing and footwear per person per day) extra socks, underwear, hat, gloves, and sturdy shoes
- Mess kits, paper cups, plates and plastic utensils
- Cash (at least \$20) or traveler's checks, change for phone calls
- Non-electric can opener
- Fire extinguisher: small canister, ABC type
- Important family papers (copies of birth certificates, marriage licenses, wills, insurance forms, phone numbers, credit card information)
- Sun block/sun glasses, hat
- Portable toilet
- Insect repellent
- Tape
- Compass
- Aluminum foil
- Signal flare
- Household chlorine bleach

- Special or prescription medication
- Baby items - formula, diapers, bottles, powdered milk, medications, and favorite security items
- Games, books, toys
- Contact lenses and supplies; a spare set of contacts or glasses if available

You should inspect your kit at least twice a year. Rotate food and water every six months. Check children's clothing for proper fit. Adjust clothing for winter or summer needs. Check expiration dates on batteries, light sticks, warm packs, food and water. Keep a light source stored in the top of your kit for easy access in the dark.

Your kit should be in a portable container located near an exit of your house. A large plastic garbage can with a lid makes an excellent storage container. Make sure you have not overloaded your kit as you may have to carry it long distances to reach safety or shelter. You may want to have a backpack or duffle bag for each family member and divide up the rations in the event that family members are separated during evacuation or the disaster.

## Agencies and Resources

The following is a partial listing of contact agencies that supplied information for this guidance and may be able to provide additional emergency information.

Inyo County Sheriff's office

1-(760) 878-0323

Big Pine Fire Department

1-(760) 938-2600

Amerigas

1-(760) 873-6371

Los Angeles Department of Water and Power Trouble Reporting (DWP)

1-(760) 387-2400

State-Federal Flood Operations Center

(800) 952-5530

Office of the State Fire Marshall

(916) 445-8200

Department of Water Resources

(Flood Forecasting)

(800) 952-5530

Department of Housing & Community Development (HCD)

Division of Codes and Standards, Manufactured Housing Section

(916) 445-3338

HCD Northern Area Office  
9342 Tech Center Dr. Suite 550  
Sacramento, CA 95826  
(916) 255-2501

HCD Southern Area Office  
3737 Main St, Ste 400  
Riverside, CA 92501  
(951) 782-4420

California Emergency Management Agency (Cal EMA)

Counties of Mono, Inyo, San Bernardino, Riverside, San Diego, and Imperial  
(562) 795-2900

Western Propane Gas Association

2131 Capitol Ave, Ste 206  
Sacramento, CA 95816  
(916) 447-9742

American Red Cross  
Disaster Assistance Division  
(916) 993-7087

Earthquake Preparedness Center of Expertise  
Attn: CESP-D-CO-EQ  
211 Main Street  
San Francisco, CA 94105-1905  
(415) 744-2809

Western Manufactured Housing Communities Association (WMA)  
455 Capitol Mall, Ste 800  
Sacramento, CA 95814  
(916) 448-7002

California Mobile Home Resource & Action Association (CMRAA)  
P.O. Box 7468  
San Jose, CA 95150  
(408) 244-8134

National Weather Service (NWS)  
3310 El Camino Ave, Room 226  
Sacramento, CA 95821  
(916) 979-3041
